Objective of lecture.

- Inverse of matrix by Elementary row operation-2x2 matrix.
- -Use Elementary Matrices to get the inverse of a matrix-2x2 matrix.

Prepared by Eng. Maged Kamel.

This is a fun way to find the Inverse of a Matrix:

Play around with the rows (adding, multiplying or swapping) until we make Matrix **A** into the Identity Matrix I

"Elementary Row Operations"

And by ALSO doing the augmented anges to an Identity Matrix changes to an Identity Matrix it magically turns into the

AX=B

The "Elementary Row Operations" are simple things like adding rows, multiplying and swapping ... but let's see with an example: then $A(A_X^{-1}) = I$ entity Matrix $Perform A^{-1}(A) A = A^{-1}$

A 3x3 Identity Matrix

Identity Matrix

The "Identity Matrix" is the matrix equivalent of the number "1":

$$OPerationS \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} \implies$$

$$\Rightarrow$$

It is "square" (has same number of rows as columns),

- It has 1s on the diagonal and 0s everywhere else.
- It's symbol is the capital letter I.

Elementary row operations

swap rows

multiply or divide each element in a a row by a constant

replace a row by adding or subtracting a multiple of another row to it

An elementary matrix is a square matrix that is equivalent to the identity matrix after one elementary row operation.

Type I An elementary matrix of type I is a matrix obtained by interchanging two rows of I.

$$\begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} a & b \\ c & d \end{bmatrix} = \begin{bmatrix} c & d \\ a & b \end{bmatrix}$$

An elementary matrix is a square matrix that is equivalent to the identity matrix after one elementary row operation.

For Matrix A: 5 4 to get the Identity matrix I, we have done the following operations (1) Divide Ri(-1), we Can Use an Sliminatry matrix to 3per form that operation $) \Rightarrow \begin{bmatrix} 3 & 0 \\ 0 & 1 \end{bmatrix} \Rightarrow E_{1}$

Try now
$$\begin{bmatrix} -\frac{1}{3} & 0 & 7 & [-3 & -2] & [+1 & \frac{2}{3}] \\ 0 & 1 & 7 & 4 \end{bmatrix} = \begin{bmatrix} +1 & \frac{2}{3} \\ 7 & 4 \end{bmatrix}$$
