

Introduction to Local buckling for Columns

- What are stiffened and unstiffened elements
- How to develop expression for local buckling for stiffened and unstiffened elements?

Sample

Figure 6.3.6 shows the stiffened elements on some typical steel sections and the measurement of the element width, h , and thickness, t . Note that "W" shapes and channels each have one stiffened plate element in their cross-section. A square or rectangular HSS has four stiffened elements in its cross-section. Normally, unstiffened plate elements can be stiffened with the addition of plate elements as seen in the figure.

SALmon \rightarrow stiffened elements
non stiffened elements

f_{av}
Unstiffend

$$P_n = (b t) f_{av}$$

Stiffened

$$P_n = (b_e t) f_{max}$$

Prepared by Eng. Maged Kamel.

Page 318 - Chapter 6 Salmon ϕ_A & ϕ_s terms

Compression members composed of both stiffened and unstiffened shall be treated as unstiffened for establishing f_{av} : then the effective width for the stiffened is determined using $f_{av} = f_{max}$

Unstiffened

$$P_n = A_g \cdot f_{av}$$

$$P_n = A_g f_{av} \left(\frac{f_{max}}{f_{max}} \right)$$

$$= f_{max} (\phi_s) A_{gross}$$

$$\phi_s = A_{av} / f_{max}$$

stiffened

$$P_n = A_{eff} \cdot f_{max} \left(\frac{A_{gross}}{A_{gross}} \right)$$

$$= \left(\frac{A_{eff}}{A_g} \right) \cdot (f_{max} \cdot A_{gross})$$

$$P_n = \phi_A (f_{max}) (A_{gross})$$

$$\phi_A = A_{eff} / A_{gross}$$

Prepared by Eng. Maged Kamel.

Page 318 - Chapter 6 *Salmon*

$$P_n = f_{av} \cdot A_{eff}$$

Whole Section

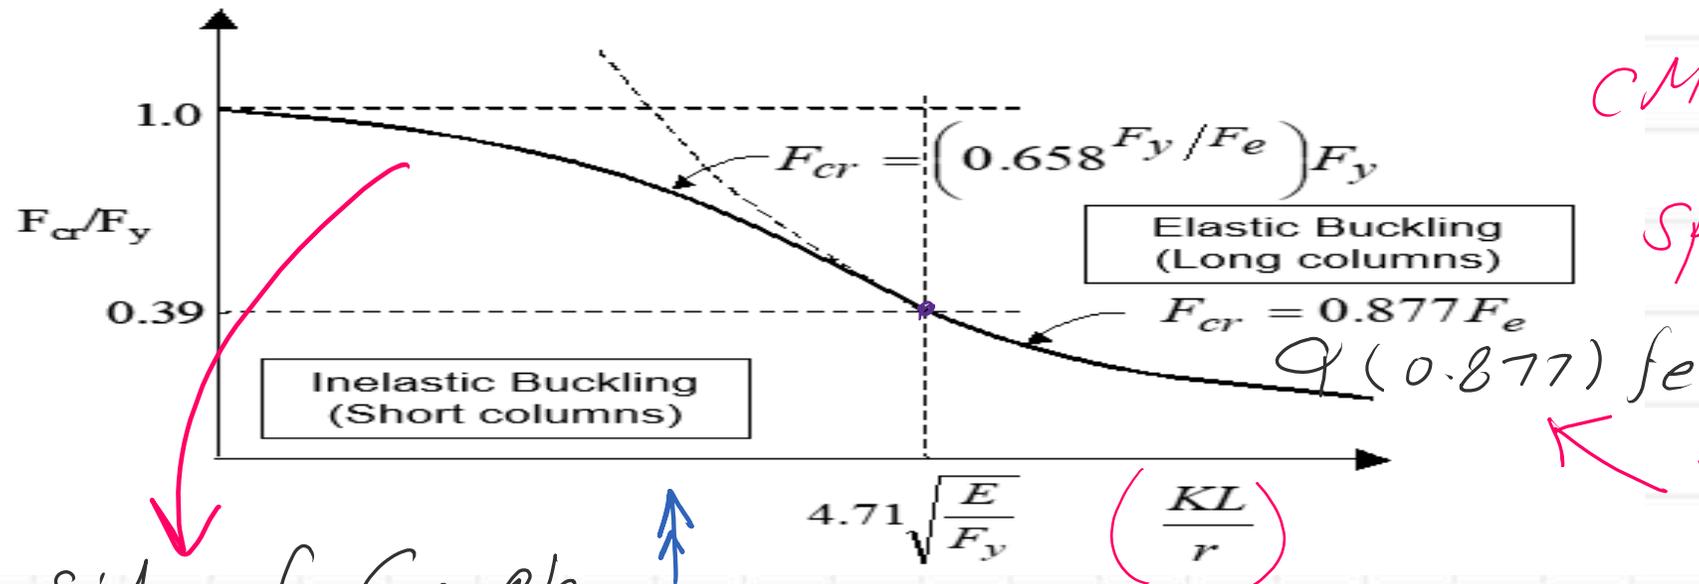

$$P_n = f_{av} \cdot A_{eff} \left(\frac{f_{max}}{f_{max}} \right) \left(\frac{A_g}{A_g} \right)$$

(Note: Red arrows in the original image point from f_{av} to $\frac{f_{max}}{f_{max}}$ labeled ϕ_s , and from A_{eff} to $\frac{A_g}{A_g}$ labeled ϕ_A)

A_g : gross area
 f_{max} : maximum stress

$$\phi_A = \frac{A_{eff}}{A_g}$$
$$\phi_s = \frac{f_{av}}{f_{max}}$$

$$P_n = \phi_s \cdot \phi_A \cdot f_{max} \cdot A_{gross}$$

CM # 14

Spec. 2010

right side by Q

Left side of Graph

$$F_{cr} = Q_s Q_a \left(0.658 \frac{Q f_y}{f_e}\right) f_y$$

For parameters of stiffened and unstiffened

$$F_{cr} = Q_s Q_a \left(0.658 \frac{Q F_y}{F_e}\right) (F_y)$$

$$Q_s \cdot Q_a = Q$$

Prepared by Eng. Maged Kamel.
